3D Flower Ball

This impressive Flower ball is made from 12 Origami flowers, making sure all edges of each flower are connected to another. This decoration is perfect for any occasion whether it be Christmas or Birthday. Tie ribbon through one of the edges and decorate with ribbon ties, make in gold paper and use as a unique star for your tree or insert a stick for a cute topiary tree.

1: Cut 5 100 mm x100 mm squares.

2: Using one piece of paper at a time, face the right side downwards. Fold the bottom corner up to the top to make a triangle.

NOTE: Each 100 mm x 100 mm square makes one petal.

3: Bring the side points up to the top point so that it makes a diamond.

4: Fold back the top 2 layers outwards so that the edges that were running vertical in the centre, now line up with the corner sides of the square underneath. If you have folded it correctly you should have 2 horizontal edges, as shown in the second image.

5: Open up your newly formed triangles and fold down onto themselves so that the old corner fold line is now in the centre of a kite shaped top layer.

6: Fold the points of the kites inwards so that the corners align with the square underneath.

7: Fold the kites in half again, over existing creases. Once folded, glue the 2 outside faces together.

8: Your finished petal should look like image shown.

Repeat steps for all 5 sheets of paper and glue each petal together. Use paperclips to hold together sides whilst glue dries

NOTE: To make 3D flower Ball, repeat origami flower 12 times.
